

Jenitha Johnson Maxi

Dear Hiring Manager,

I am writing to apply for a DevOps Engineer Intern position at your organization. I am a Computer Science undergraduate at the Sri Lanka Institute of Information Technology (SLIIT), with hands-on experience in containerized backend deployment, CI/CD pipelines, and cloud infrastructure. I am passionate about DevOps, cloud infrastructure, automation, and continuous delivery, and I am eager to further develop these skills while contributing to a collaborative engineering team.

In my most recent project, Pathfinder, a cloud-based internship management system, I containerized the ASP.NET Core backend using Docker, deployed it to Microsoft Azure with Azure SQL Database connectivity, and deployed the React frontend on Vercel. I built a GitHub Actions CI/CD workflow that automatically creates Docker images, pushes them to Docker Hub, and supports automated deployment, while securely managing configuration through environment variables and GitHub Secrets. During the Palm Beach Resort project, I collaborated within an Agile team on backend integration and database management while using Git, Jira, and Postman as part of the development workflow. I also independently built LifeMentor, a full-stack wellbeing platform, where I implemented JWT authentication, BCrypt password hashing, and secure account protections and deployed the frontend using GitHub Pages, gaining practical experience in application deployment and release management.

What sets me apart is my hands-on experience with modern DevOps practices rather than only theoretical knowledge. Through my projects, I have built and deployed Docker containers, implemented GitHub Actions CI/CD workflows, managed application configuration using environment variables and GitHub Secrets, and deployed applications on Microsoft Azure with Azure SQL integration. I am also comfortable working with Linux environments and shell commands for application deployment and configuration. Alongside my project experience, I am continuously expanding my knowledge of AWS, Kubernetes, Terraform, monitoring, and infrastructure automation. I am eager to apply these skills while learning from experienced DevOps engineers and contributing to reliable deployment and automation processes.

I would welcome the opportunity to discuss how my hands-on experience with Docker, CI/CD, cloud deployment and automation can contribute to your DevOps and infrastructure initiatives while allowing me to continue growing as a DevOps engineer. My CV, along with project details on my GitHub, is enclosed for your review, and I am available at your convenience for an interview.

Thank you for considering my application. I look forward to hearing from you.

Sincerely,

Jenitha Johnson Maxi
